NAME
mprobe − smtp-server aliveness probe

SYNOPSIS
mprobe
　　　hostname

DESCRIPTION
The *mprobe*(8zm) is usable to test, if the named host (no IP address allowed!) has a smtp-server, that responds properly.

EXIT CODES

0	All is well, smtp-server responded just fine
2	Can't resolve target hostname
3	*mprobe*(8zm) internal failure, can't create socket (should not happen!)
4	failed to connect to the remote host
5	*mprobe*(8zm) internal failure, fdopen() failed.. (should not happen!)
17, 19	The remote smtp-server hung-up on us, most likely
18	The remote smtp-server did respond something, but it did not begin with "220"
20	Timeout (60 seconds) from start of processing.
99	Missing mandatory host parameter.

SEE ALSO
